

## Aluminium Oxide white

250 µm, 110 µm, 50 µm

For sandblasting restorations made from any type of alloy. HINRICHS' high-grade corundum does not cause silicosis and complies with health and safety regulations. The sharp-edged grains and extreme hardness guarantee very efficient sandblasting.

Other corn sizes are on request available.

## Poliresin®

An odourless polishing agent specially developed for polishing acrylic dentures. Poliresin® is used in the same way as pumice, but smoothes even more effectively and has a 30 % longer life span. The acrylic is gently polished due to the unique crystalline structure of Poliresin®. The time required for the subsequent high-lustre polish is greatly reduced.
